Software is so much more than your desktop at work. Software is apps. Software is data. Software is cloud computing. It creates breakthroughs and drives growth in nearly every industry. Software empowers countless people and American businesses, and improves our lives each day in ways big and small. Along with all this progress comes the dramatic, positive impact software is making on our national economy each year. *The Economic Impact of Software*, a first-of-its-kind study from BSA | The Software Alliance conducted in 2016 by The Economist Intelligence Unit (EIU), captures the breadth of the software industry in the US and the sweeping economic impact it is making at state and national levels.

### Jobs

#### Direct:
**2.5 million jobs**

From software developers and web designers to futurists, project coordinators, administrative assistants, and accountants, software creates jobs for a wide variety of professionals in today’s workplaces. These numbers capture jobs created directly by the software industry, as well as jobs the software industry supports through indirect and induced impacts.

#### Total:
**9.8 million jobs**

### Wages

**Average Annual Wage for Software Developers:**

$108,760

A software developer’s wage is more than twice the average annual wage for all US occupations, which was $48,320 in 2015.

### Research & Development

**R&D Investment by Software Companies:**

$52 billion

17.2% of All Domestic Business R&D in the US

From developing new data analytics to driving breakthrough technologies like cognitive computing, the software industry’s commitment to R&D continues to spur innovation at unprecedented rates.

METHODOLOGY

To estimate the total contributions of the software industry to the US economy, The EIU analyzed the direct contributions and estimated indirect and induced impacts using various economic multipliers:

1. Direct contributions: the levels of output or employment of the industry in question;
2. Indirect impacts: the inter-industry economic activity resulting from the direct contributions (e.g., purchases of inputs);
3. Induced impacts: the additional economic activity supported by spending on goods and services by households whose income was affected by the direct contributions and indirect impacts.

www.bsa.org/softwareimpact

The EIU compiled these data and economic impact assessments using publicly available government data, maintaining full editorial control of the process and using industry standard approaches. Any views or opinions expressed in this document are not necessarily those of The Economist Intelligence Unit.
